

Capacity Building for Insurance Supervisors – Leveraging Actuarial Skills

Self-directed virtual training

About the training

In response to high demand from insurance supervisors, the [International Actuarial Association](#), the [Access to Insurance Initiative](#) and the [International Association of Insurance Supervisors](#) have launched a self-directed virtual training on actuarial skills for supervisors.

The modules are hosted on the Connect.A2ii learning platform and are open to all supervisors with a Connect account free of charge. To complement the self-directed part, IAA, A2ii, and the IAIS are planning a series of focused Q&A live sessions with the trainers. The details will be subsequently announced.

This training aims at strengthening the understanding and application of the actuarial concepts and tools needed to support effective insurance supervision and regulation. The focus and approach are on teaching principles while making the training as practical and simple as possible through knowledge checks and case studies.

The modules span four areas:

1. Enterprise Risk Management
2. Valuation and Actuarial Reports
3. Reinsurance
4. Risk-based Capital

The training is held in English.

You should expect to spend approximately 4.5 hours on this training.

Modules on Connect.A2ii
