CASE STUDY: ARGENTINA

Women leaders in insurance supervisory organisations - catalysts for women's access to insurance

Inclusive insurance policymaking is not gender-neutral.
Integrating a gender perspective into regulation and supervision means removing regulatory barriers to women’s access to insurance, promoting gender diversity in the insurance industry, and establishing gender-sensitive financial literacy strategies.
How to conduct a rapid gender diversity assessment

Data-driven gender policymaking is critical, as it allows creating targeted policy tools tailored to gender-specific barriers or impacts.
Join us in promoting gender-sensitive policymaking for inclusive insurance, and let's work together to ensure that women can access the financial protection they need to thrive.
